Nutritional Tips

Good control of diabetes cannot be obtained with medicine alone. Dietary/nutritional management is essential in its management. Following points should be kept in mind while planning a menu:

- Eat five - six small frequent meals,
- Eat high-fibre foods such as vegetables and fruits, pulses such as dals, beans and chollay, and high-fibre cereals.
- Take fresh vegetable salad with each meal like lettuce, cucumber, carrot etc,
- Eat less fat and oil - minimize your over all oil intake,
- Reduce your intake of sugar and sugary foods.
- Replace beef with fish and chicken or dals and beans.
- Try to reduce the amount of salt in the diet,
- Use low fat (cream/*balai* removed) milk and low fat milk products.
- Avoid special diabetic food and slimming foods, e.g. diabetic rasmalai or sweets and chocolate.

Glycemic Index

Is a measure of blood glucose response to certain foods containing 100 gms of carbohydrate foods containing

- GI of 55 or less = Low GI foods are good for Diabetes
- GI of 56 or 69 = Medium GI
- GI of 70 or more = High GI

Example:

Carrot GI = 47

Peas GI = 48

Apple GI = 38

White bread = 70

Potato Raw = 57

Rice = 58
